Issue 102 — April 22, 2015

Managing Big Enough Data in Postgres

Postgres is an amazing database when your active data fits in memory. If it doesn't then you're starting to look at a sizable dataset (greater than 100 GB) and at that point a little more care and effort may be required..

TARKA LABS

PostgreSQL Dockerfile

This project can be used to deploy a PostgreSQL server inside a Docker container.

Tuning for Performance in Production – The DBA Role

Over time, conditions change including data growth, usage patterns, and the amount of resources available to the database. Periodic tuning is the Postgres DBAs role to ensure that things continue to run smoothly. Learn how to [optimize performance](#) or get help with a [database check up](#).

How to Handle Key-Value Data in Postgres

Sure, Postgres is a relational database but that doesn't mean it doesn't have the flexibility to work with key-value data. HStore is an awesome solution for that and it's a built-in extension.

STORMATICS

meteor-pg: Reactive PostgreSQL for Meteor

Working with Meteor because it's a more responsive framework? Well Postgres can play well with it too using this latest package that brings reactive Postgres to Meteor.
