## Postgres Weekly

**Issue 65**

July 23, 2014

### [Caching Expensive Queries with Materialized Views in PostgreSQL](#)

Have a variety of long running queries that you need to access or report on more quickly? Materialized views can help in periodically refreshing the results. They're available in 9.3 and get even better in 9.4.

### [Amazon RDS PostgreSQL Update](#)

Amazon's RDS for Postgres is now out of public beta and generally available, along with SLAs. Take a look here for some of the people taking advantage as well as details around their SLA

*AMAZON*

### [Postgres 9.5 feature highlight: IMPORT FOREIGN SCHEMA](#)

Foreign tables are incredibly powerful within Postgres. Though even in Postgres 9.3 with the Postgres FDW there have been some rough usability edges. Now in 9.5 (no not 9.4), there's some great utility functions to make listing and importing foreign tables and schemas easier.

*MICHAEL PAQUIER*

### [Rails 4 and PostgreSQL Arrays](#)

Rails 4 included support for Postgres' array fields. Bernardo shows off the basics of how they work.

*BERNARDO CHAVES*

### [Getting information about PostgreSQL SSL connections](#)

Postgres has a variety of methods/options for how it can connect via SSL or not. While you can set certain policies the tools for then inspecting such are a little more rudimentary. Here's a look at how you can explore further.
