Issue 97 — March 18, 2015

Stopping Expensive Queries Before They Start

If you've ever run a query only to wait and realize you're slowly bringing your database to a halt because of what's happening under the covers, this may help. This module prevents certain queries from running if their query plans meet certain criteria.

APPDYNAMICS

Postgres Array and Hstore Column Reference

If for some reason you're not yet on Postgres 9.4 and therefore able to take advantage of JSONB, there are still some great flexible data options available. The array and hstore datatypes, in particular, can give you some flexibility in your schema.

QUINN SHANAHAN

Interacting with JSON and JSONB

If you haven't gotten to play with the new JSONB (in case your wondering B is for 'better'... ;-)) in Postgres, here's a look at some of the basics. Learn how to search for certain keys, interact with text within the object, and more.
